Restoration of the swamp: Nature Glenelg Trust conducted works on the outlet drain in 2014 to allow the wetland to retain an extra 60 cm of water, the fill level rising to 0.9 m. That capacity was achieved in the winter of 2016.

Year	2014	2015	2016	2017	2018	2019
Rainfall (mm)	488	471	838	672	565	508

Surveys: 7 surveys have been made, the first on 23 Feb. 2017 when the water cover over the swamp was approx. 90%, following a wet year in 2016. The swamp was almost dry in Feb. 2019 and down to about 30% cover in Feb. 2020, following a dry spring.

Relative abundance: vc = very common, c = common, uc = uncommon, r = rare, vr = very rare.

Frequency: number of surveys (out of 7) when the species was present.

Range: lowest and highest numbers recorded when the species was present.
